

### The Royal Agricultural University

Programme Specification:

# Postgraduate Certificate Retrofitting, Regeneration and Sustainability in Historic Buildings

Academic year 2024/25

#### PROGRAMME SPECIFICATION [ACADEMIC YEAR 2024/25]

This Programme Specification is designed for prospective students, current students, academic staff and potential employers. It provides a concise summary of the main features of the programme and the intended learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More

detailed information on the teaching, learning and assessment methods, learning outcomes and content of each module can be found in the Module descriptors.

#### **Section 1 – Material Programme Information**

| Validating body   | The Royal Agricultural University   |
|---|---|
| Teaching Institution  | The Royal Agricultural University   |
| Subject Area  | Land and Property Management  |
| Entry Award(s)  | Postgraduate Certificate Retrofitting, Regeneration and   |
| Life y / Wara(5)  | Sustainability in Historic Buildings  |
| Final Award and exit  | Postgraduate Certificate Retrofitting, Regeneration and   |

#### **Section 2 - Programme Structure**

The structure of all University awards complies with the University's <u>Academic Regulations</u> for Taught Programmes which includes information about the:

- Rules for progression between the stages of a programme;
- Consequences of failure for referrals, compensation and exist awards;
- Calculation and classification of awards.

The programme will be delivered as a form of block teaching built around two intensive teaching days per week for full-time students and one teaching day a week for part-time students over two years.

The Postgraduate Certificate programme consists of two x 30 credit taught modules.

For those taking the Postgraduate Certificate programme full-time, two modules are taken over one semester.

For those taking the Postgraduate Certificate programme part-time over two-years, participants will take one 30 credit modules per year in the January semester.

## Postgraduate Certificate Retrofitting, Regeneration and Sustainability in Historic Buildings (60 credits)

The accumulation of 60 credits at level 7, through the assessment of programme elements as detailed below:

| Module code | Module title   | Level | Credit value | Core/<br>Elective | Semester |
|-------------|--|-------|--------------|-------------------|----------|
| Level 7     |  |       |              |                   |          |
| 4761        | Practical Conservation, Retrofitting and Sustainability                      | 7     | 30           | Core              | 2        |

| Buildings                  |  |  |

#### **Section 3 – Programme Overview and Programme Aims**

This programme is designed to equip learners to pursue careers in historic built environment conservation, regeneration and retrofitting. It focuses on developing essential skills, methods and approaches to the repair and retrofit of historic buildings as well as inculcating the initiative, adaptability, decision-making and self-direction required for wider regeneration work. There is an emphasis on personal and professional development throughout the programme.

It is particularly suitable for learners with qualifications and/or experience in the development, building, heritage or built environment sector who wish to move into regeneration and the historic building sector, or for those already working within the field who wish to specialise or extend their role.

The course has two main strands:

The first focuses on the practicalities surrounding the conservation and retrofitting of historic buildings. This includes the ethical considerations around identifying conservation-appropriate methods, materials, designs and finishes. It also explores the options – and challenges – associated with sensitively improving the performance and sustainability of historic and traditional buildings, including the identification of inappropriate previous interventions. This includes understanding and correctly interpreting building pathology and using this data to inform decision around materials and interventions as well as monitoring and evaluating the results.

The second focuses on the potential of historic buildings to contribute to wider regeneration of an area. Here we concentrate on putting buildings to work in the community, moving away from thinking of buildings as their footprint of the building and towards a viable future use. We examine the economics of regeneration, including the role of partnerships with heritage organisations, local groups and business to draw on and generate local momentum and investment.

The overarching goal of the programme is to equip students with the tools they will require to manage or undertake retrofitting and/or regeneration projects, to improve the environment, social and economic sustainability of our historic buildings and wider areas.

To that end, the programme will:

- Offer an innovative, dynamic and research-informed programme built around contemporary issues, challenges and developments in historic building conservation and management in the light of rapid social, economic and environmental change.
- Provide a robust ethical, theoretical and practical framework for exploring and managing projects in historic buildings.
- Enable participants to apply knowledge creatively to the analysis of complex, incomplete or contradictory areas of understanding.

- Develop an in-depth, inquiry-led, understanding of a "toolbox" of skills including:
  - Understanding of Building Context and Significance
  - Identification of Problems with Historic Buildings
  - Practical Conservation Skills
  - Heritage Management, Planning and Law
  - Community Engagement and Partnership Development

By the end of the programme students will have completed two impressive pieces of project-led work demonstrating a high level of originality and professional integrity which will enable them to embark on a career in the built heritage sector.

#### **Section 4 – Programme Sustainability**

This programme is aligned to UN Sustainable Development Goal (SDG) 11 which aims to make cities and human settlements inclusive, safe, resilient and sustainable. It also contributes towards several other SDG goals. It does this by training buildings and development practitioners in the identification of sustainable future uses for historic and traditional buildings and the sustainable design of retrofitting solutions for the same. The will ensure that historic and traditional buildings:

- perform as efficiently as possible in terms of energy and other resource use (SDG7, SDG12 & SDG13);
- retain historically captures carbon and reduce the need for the production of new materials (SDG12);
- be more resilient to the impacts of a more severe climate (SDG13);
- provide viable future uses for historic buildings (SDG8);
- explore and support the development of new, climate positive materials (SDG9 & SDG12);
- save money and contribute towards an economically viable future (SDG8);
- help communities to become more resilient (SDG10);
- reduce fuel poverty (SDG1 & SDG10) and produce efficient water use (SDG12);
- provide better standards of housing and workplace environments, which increases the wellbeing of users (SDG3).

#### **Section 5 – Programme Intended Learning Outcomes**

The learning outcomes employ those of the OfS Sector Standards, QAA Master's degree specification and the QAA Archaeology specification. They use established skill group descriptors which relate to national standards from the Institute of Historic Building Conservation and the Royal Institute of Chartered Surveyors.

On successful completion of the named award, students will be able to demonstrate the following Learning Outcomes (LOs):

#### **Knowledge and Understanding**

| LO<br>no. | On successful completion of the named award, students will be able to:   | Module<br>Code/s |
|-----------|--|------------------|
| 1.        | Historic Building Materials Understand the appearance, properties, performance, challenges and benefits of historic and traditional building materials   | 4761             |
| 2.        | Environmental and Social Context  Contextualise the inter-relationship between building form and the physical, economic and social environment   | 4762             |
| 3.        | Investigating Buildings Understand the methods and techniques used to investigate, building pathology in historic and traditional buildings and how to apply them.   | 4761             |
| 4.        | Regeneration Practice Identify the interplay of material, economic and social issues within historic buildings and areas and devise appropriate approaches to regeneration.  | 4762 & 4761      |
| 5.        | The Heritage Ecosystem Recognise the professional, ethical, economic, social, political and policy environment of historic building retrofitting, sustainability and regeneration.   | 4762             |
| Intel     | lectual, Professional, Key skills  |                  |
| LO<br>no. | On successful completion of the named award, students will be able to:   | Module<br>Code/s |
| 1.        | Leadership (a) Identify appropriate leadership styles for different situations: to enable/mentor, enhance/coach and motivate others in order to improve performance (of self and others) (b) Recognise and address ethical dilemmas and to apply ethical values to situations and choices. | Both modules     |
| 2.        | Personal Effectiveness  Demonstrate critical self-awareness, self-reflection and self-management; time management; sensitivity to diversity in people and different situations, and the ability to continue to learn through self-managed study, reflection on practice and experience.    | Both modules     |
| 3.        | Interpersonal Skills (Teamwork)  Demonstrate effective performance within teams and the ability to recognise and utilise individuals' contributions in group processes and to negotiate and persuade or influence others; team selection, delegation, development and management.          | Both modules     |
| 4.        | Communication Carry out effective two-way communication: listening, effective oral and written communication of complex ideas and arguments, using a range of media, including the preparation of reports/documents appropriate to the audience.   | Both modules     |

|                | Digital Skills   | Both modules         |
|----------------|--|----------------------|
| 5.             | (a) effective comprehension and professional use of IT including   | Dour modules         |
|                | email and internet, databases, spreadsheets and word processing.   |                      |
|                | (b) Understanding of digital recording, analysis interpretation and  |                      |
|                | presentation.  |                      |
|                | (c) Ability to apply digital skills to information gathering and   |                      |
|                | problem solving across several areas.  |                      |
| 6.             | Critical and Creative Thinking   | Both modules         |
| 0.             | Think critically and be creative: To manage the creative processes   | Both modules         |
|                | in self and others; The capability to organise thoughts, identify  |                      |
|                | assumptions and evaluate statements in terms of evidence, detect   |                      |
|                | false logic or reasoning, identify implicit values, define terms   |                      |
|                | adequately and generalise creatively but appropriately.  |                      |
| 7.             | Problem Solving and Decision Making  | Both modules         |
|                | Solve complex problems and make decisions: establish criteria  | Doctri modules       |
|                | using appropriate decision-making techniques, apply them to  |                      |
|                | create and evaluate options and then implement and review  |                      |
|                | decisions.   |                      |
| 8.             | Research Design and Implementation   | Both modules         |
|                | Identify problems, and design and conduct research either  |                      |
|                | individually or as part of a team.   |                      |
| 9.             | Synthesis, Analysis and Evaluation   | Both modules         |
|                | Locate, synthesise, analyse and evaluate data and information  |                      |
|                | from a wide range of sources to support and evidence solutions to  |                      |
|                | problems.  |                      |
| 10.            | Numeracy and Statistical Literacy  | Both modules         |
|                | Apply quantitative skills including methods for the handling and   |                      |
|                | analysis of large numerical data sets. Understanding of the  |                      |
|                |  |                      |
|                | application of statistical tools to research questions.  |                      |

#### Section 6 – Approach to Learning and Teaching delivery

#### **Learning and Teaching Strategy**

The conservation and management of historic buildings requires practitioners to have knowledge across a range of historical and applied disciplines from architectural history, sustainability and legal frameworks. Like other areas of applied heritage, it has the attributes and requirements of a professional practice that makes it amenable to being taught in a reflective setting, with opportunities for practical fieldwork and fieldtrips.

This programme has specifically been designed to meet the needs of postgraduate learners many of whom may be combining study with work and/or caring or other responsibilities. Teaching is designed to be fully flexible, to allow full participation for both part-time and full-time students.

Here at the RAU we are always looking for ways to support our students. We recognise that a number of our UK domiciled students may be working or have caring responsibilities alongside studying, which can sometimes make it difficult to attend all lectures in person. As such we have the ability for you to participate in in-class sessions online, and if you are unable to do this, recordings of lectures will be available after they have been held. Learners who are frequently unable to participate synchronously may request additional tutorials to discuss and consolidate session content. Please note that this type of study participation is only available to registered UK based students and for Postgraduate Study. We strongly recommend students to attend field trips and some other practical or hands-on sessions in person. Your programme or module leader will be happy to discuss this with you before hand.

Our sessions are built around exercises to support and scaffold the learning process, and to provide valuable opportunities for peer-to-peer learning. Material is taught in workshop format combining formal elements, such as lectures, with more hands-on exploratory or consolidatory exercises, for example discussions, 'live' group research to explore or apply a particular concept, group-crit sessions, supported writing exercises, and problem-based learning.

We know that learners have many and varied motivations and ambitions for taking this programme. We therefore concentrate on drawing out and articulating these with the learner to create a tailored route through the programme, whether that be tailored training opportunities, targeted reading, or support in designing assessment projects that will be relevant to their needs.

This programme recognises that there are many demands on learner's time and that these may fluctuate over the course of the programme. We therefore provide for a flexible spectrum of participation. We ask learners to complete a minimum of 30 credits (one module) per academic year with a maximum time allowance of six years to complete the full 180 credit programme. Should a learner's personal circumstances change, they may switch between full and part time modes of study. They are also able to move between the PG Certificate, PG Diploma, and MSc programmes by the completion of the appropriate number of core credits.

Our building, seminar rooms, lecture theatre, laboratory and toilet facilities are fully accessible with parking provision for Blue Badge holders at the front door. Care is taken to

ensure practical sessions and field trips are accessible to as wide a range of students as possible and module leaders are always happy to discuss ways of improving access to learning.

#### **Section 7 – Approach to Assessment**

The full Postgraduate Certificate programme comprises two modules.

Both taught modules are assessed by course work. The intention of the course work assessments is to replicate the range of analyses, syntheses, reports and products which may reasonably be expected from an individual working professionally in the retrofitting, regeneration and sustainability sector. Assessments are focussed around professional outputs that are typically produced by trained historic building specialists. This could, for example, include a regeneration plan, viability study, buildings pathology report, retrofitting scheme, or sustainability intervention. There is plenty of flexibility around the format assessments can take and module leaders will work individually with students to help them develop research projects, methods and approaches that will not only meet the assessment criteria but will also help them achieve their wider aims for the programme. It is possible to work on a live brief for an employer.

Alongside tutorials and discussions, formative, in-class exercises will be used to scaffold and develop the learner's writing skills. Learners may take part in group-crits on their work in progress, sessions on understanding and incorporating feedback/feed-forward, and inclass supported-writing exercises. These will provide valuable formative feedback and allow peer-to-peer learning to take place. Postgraduate Certificate students, are most welcome to audit the first eight weeks of the 4700 Dissertation module in order to strengthen their long-format writing and research skills.

This programme is very much designed as a stepping-stone into the historic built environment sector. Learners are therefore encouraged to treat the assessments as opportunities for portfolio- and network-building. To this end, learners are encouraged and supported to negotiate 'live' projects with building owners and users, community groups or heritage organisations. This will ensure that there is real world input into the development of their assessed work and the work produced will be useful and impactful, public- and/or sector-facing outputs.

Overall, the programme is taught and assessed through:

|        | Learning and Teaching |             |           |      | Assessment |            |
|--------|-----------------------|-------------|-----------|------|------------|------------|
|        | Directed              | Independent | Placement | Exam | Practical  | Coursework |
| Year 1 | 33.3%                 | 66.7%       | 0.0%      | 0.0% | 0.0%       | 100.0%     |

#### Section 8 – Course work grading and feedback

Assessment is an integral part of the learning experience of students. All University programmes are assessed by a range of assessment activities, each developed to provide the most appropriate means of demonstrating the student's achievement of a specified learning outcome. An assessment may assess more than one learning outcome.

The University operates standard pass criteria which can be found in the RAU Academic Regulations (paragraphs 137 - 153).

The normal basis for awards will be the overall average score in the final assessment, graded as follows:

| Distinction weighted average of | 70% and above |
|---------------------------------|---------------|
| Merit weighted average of       | 60% - 69%     |
| Pass weighted average of        | 40% - 59%     |
| Fail average                    | 0% - 39%      |

In addition to assigning a percentage mark to the work, tutors provide written feedback for all assessments which normally includes the strengths and weaknesses of the piece as well as advice about improving the work. Individual feedback is provided within 20-working days of the deadline for submission. All assessment decisions are subject to internal moderation and external scrutiny by the programme's External Examiners. Students must ensure they retain all coursework in case the External Examiner(s) wishes to see it.

#### **Section 9 - Progression**

This programme is designed to respond to the growing need within the built environment sector for practitioner skilled in retrofitting, sustainability and reuse. This program provides a targeted, Master's-level introduction to the practicalities of adapting and managing historic and traditional buildings for a sustainable and successful future.

In consequence, the course is suited to those working in development, building management, or the wider built environment sector seeking to improve their knowledge of - and practice around – historic buildings. This flexible course is also suitable for those from a heritage background to increase their understanding of the practical aspects of building management and sustainability.

Students are moreover encouraged to work with existing employers or approach heritage organisations to negotiate 'live' projects for their various pieces of assessed work. They could, for example, design a carbon-reducing retrofit plan for a local church, or put together a Historic England bid for the regeneration of a community asset. Real projects such as these help to build the learner's professional network and introduce them to the reality of working with diverse stakeholders. The public- and/or sector-facing nature of these projects also ensures good visibility for the learner's work and helps them to establish their professional reputation in their chosen sector.

The degree will enable graduates to pursue careers in historic building conservation, urban or rural regeneration, retrofitting, etc. and to work in local authorities, heritage organisations, museums and the private sector which require specialists with a buildings and structures focus.

#### Section 10 – Student support, wellbeing and counselling

The <u>University</u> is offering a wide range of support to all RAU students including practical advice and guidance as well as emotional support.

#### **Disability and neurodiversity support**

We support students with a range of disabilities, learning difficulties, and other health and mental health conditions, helping them to access funding via the <u>Disabled Students</u> Allowance .

When you tell us about a disability, you will be offered support based on your specific needs which can include:

- Alternative exam arrangements such as extra time, rest breaks, or a smaller room.
- Access to support workers such as study skills tutors, specialist mentors, readers and scribes.

For wheelchair users, our Swindon campus is fully accessible with Blue Badge parking directly outside.

#### **Mental health Support**

We are also here to support students with the ups and downs of university life, offering drop-in sessions, providing expert advice and support for students in crisis or with more complex needs, and together the team runs events and campaigns throughout the year to encourage positive wellbeing.

We also can help students to access external counselling sessions and these are generally delivered in collaboration with our long-term partners at Cotswold Counselling.

#### **Academic Support Tutor Programme**

Students have access to the Academic Support Tutor (AST) programme which provides high quality academic support for students. ATS provide timetabled group tutorials, and individual support for students most at risk. Group tutorials focus on providing high quality academic support at the appropriate academic level; advice and guidance in relation to the course; and advice about making study choices on the course (commensurate with the supporting AST Handbook). Individual support focus on student continuation (commensurate with The Team around the RAU Student spheres of integration student retention model) and may be in person or online.

#### Section 11 – Enhancing the Quality of Learning and Teaching

The programme is subject to the University's rigorous quality assurance procedures which involve subject specialist and internal peer review of the course at periodic intervals, normally of 6 years. This process ensures that the programme engages with the applicable national Subject Benchmarks and references the Framework for Higher Education Qualifications.

All programmes are monitored on an annual basis where consideration is given to:

- External Examiner Reports
- Key statistics including data on retention and achievement

- Results of the Student Satisfaction Surveys
- Feedback from Student Delegates from programme committees
- Feedback from Student-Staff Liaison committees
- Annual Programme Monitoring
